The dimension of an equation is estimated by the greatest number of unknown factors which enter any term after the equation is concinnated. If there be only one unknown factor, the equation is called simple; if only two, quadratic, c. 8. The root of an equation is the value of the sought quantity; or, it is the number which, substituted for the unknown quantity in the original equation, makes the whole aggregate = 0: thus 2 is a root of the equation $x + 2x - 8 = 0$; for substituting 2...
